

Customer-Owned Underground Piping?

Don't Forget Periodic Maintenance!

Example of Customer-Owned Gas Service Line

FEDERAL GUIDELINES DEFINE CUSTOMER-OWNED UNDERGROUND PIPING AS A LINE SERVING THE PRINCIPAL GAS UTILIZATION EQUIPMENT. UNDERGROUND BRANCH LINES SERVING POOL HEATERS, GAS LIGHTS, OR OTHER SECONDARY EQUIPMENT WERE NOT INTENDED TO BE COVERED BY THESE GUIDELINES.

Intermountain Gas

If you are one of the few customers who owns underground natural gas piping, Intermountain Gas Company reminds you to check it for corrosion and leaks.

Intermountain Gas Company maintains and locates its own gas lines, but does not maintain or locate underground piping that belongs to customers. In almost all cases, Intermountain Gas Company's system ends at the meter. The piping beyond the meter belongs to the customer (as illustrated on back).

If you own buried natural gas piping, follow these steps to keep it safe:

If it is steel, make sure piping is adequately protected against corrosion.

Have piping inspected periodically for corrosion and checked for leaks.

Have piping located, marked, and treated with caution while digging nearby.

Repairs should be made as soon as unsafe conditions are found.

If you own underground natural gas piping and need to arrange to have it checked, call your local plumbing dealer.
